

**LOGING IN**

You need only the internet Address, ID, and password.

**CLASS MEMBERS**

The names of all web class members can be seen in the name list 'Participants' or above the video frame. The lecturer is in the left corner with his name and Room name above him.

**CHAT**

If the student does not want to make questions he/she can write them with Chat tool. The Chat text can also be Hidden so that the teacher alone can see it – this feature can be used when testing or voting.

**TEACHING MATERIAL**

Teachers can use PowerPoint slides which can be seen by the students in real time. But several other types of documents can also be used like doc, xls, pdf, rtf. The documents can also be zoomed and scrolled.

**WebLI SYSTEM**

WebLI system is an Internet system, which runs thru our server. You don't need any downloadings. The Conference Room consists of 15 video frames for discussing purposes. The Auditorium is a lecturing tool where up to 150 students can listen to a lecture. It can also be used for making saved lectures.

**VIDEO**

You can see up to 14 Students and one teacher in Conference room. In Auditorio there can be up to 150 students, who share one video frame for making questions.

**SYSTEM REQUIREMENTS**

You need a computer with Web cam, headset, and internet connection, that is all.

**WebLI**

**WEB MEETING**

**WebLI**

WebLI is an interactive web tool, which was advanced in a TEKES -project in Oulu university by professor Yli-Luoma and his research group. It is a video based virtual meeting room, where you can see and hear all meeting members (students+teacher).

Before advancing the tool itself a web learning theory was developed (see Yli-Luoma, P. and Naeva, A. (2006) 'Towards a semantic e-learning theory by using a modelling approach', The British Journal of Educational Technology, Vol. 37, No. 3, pp.445-459.)

Presentations are produced usually by PowerPoint -slides, but quite many different kind of documents, however, are possible (e.g. doc, xls, pdf, rtf). The tool includes a converting software, which makes all of the documents compatible with the flash player, which is used by WebLI.

The lecturer can have plenty of different presentations (no limits), which are quickly changed when teaching.

The video frame can be enlarged if needed (language teaching, demos). You can also make your own video to still picture to release memory or make a call or have a cup of coffee so that others cannot see it. In WebLI the chairman (Teacher) can activate the automatic recogniser of the speaker. Every member in the Conference room has the possibility to use the automatic recogniser by clicking a button to get a hand up with a turn number on it.

Just keep in mind that you only need the www -address, ID, and password to get in.

## WebLI

is an Internet Service to get virtual meeting rooms or class rooms, where you can have interactive learning process with learning material. It can take room anywhere anytime.

---

## Technical requirements

### Web browser:

*Internet Explorer 5.0 or later*

*Mozilla Firefox 2.0 or later*

*Safari 2.0 or later*

### Internet connection:

*Broadband*

### What else you need?

*Webcam, headset with a microphone*

---

## Software License

A Yearly license for the lecturer.

The students do not need any.

*License include Conference Room with 15 video frames,  
and Auditorium with 150 places with one video frame  
for the lecturer and one for the students to make questions.*
